DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

Claims 17, 18, and 20-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maye et al., U.S. Patent 5,583,262, for the reasons set forth in the previous Office Action.

Response to Arguments

Applicant's arguments filed February 14, 2005, have been fully considered but they are not persuasive. Applicant amended the claims to be directed to a "preparation" rather than a "solution." However, the Examiner interprets the process of Maye to be a "preparation." Also, Applicant argues that heating the iso- α -acids to fluid state and then adding a concentrated aqueous alkaline metal hydroxide solution creates an unexpected result of a highly concentrated viscous solution of an alkaline metal salt of the reduced (*rho*-) iso- α -acids. Maye, however, teaches the step of heating prior to the addition of the alkali metal hydroxide solution and further discloses such a process can salt precipitate better than 70% of the hop bittering compounds (column 3, lines 54-59). Therefore, Applicant's result is not unexpected and the prior art reads on the claimed invention.
